
❑ Hackathon Problem Statement

Smart Enquiry & Demo Scheduling System

★ Problem Definition

Institutes often receive enquiries from students across multiple streams such as Data Science, Web Development, UI/UX, Digital Marketing, Video Editing, etc., but managing these enquiries manually leads to poor tracking, missed follow-ups, and lost admissions.

Build a **Web-based Enquiry Management System** that allows institutes to efficiently **capture, manage, and track student enquiries**, schedule **demo sessions/appointments**, and automatically **notify students**.

The system should include **role-based login (Admin & Counselor)**, **CRUD operations**, and an **analytics dashboard** for insights like conversion rates and stream-wise performance.

🎯 Objective

Create a centralized platform to:

- Manage all enquiries
 - Track follow-ups and status
 - Schedule demos/appointments
 - Send notifications to students
 - Generate analytics and reports
-

⚙️ Core Functionalities

🔒 1. Authentication

- Admin & User login/logout
 - Role-based access
-

📌 2. Enquiry Management (CRUD)

- Add enquiry (Name, Contact, Stream, Source)
 - View all enquiries
 - Update enquiry details
 - Delete enquiry
-

3. Stream/Department Handling

- Assign enquiry to stream:
 - Data Science
 - Web Development
 - UI/UX
 - Digital Marketing
 - Video Editing
-

4. Follow-up & Status Tracking

- Add follow-up notes
 - Update status:
 - New
 - Contacted
 - Interested
 - Not Interested
 - Converted
-

5. Demo / Appointment Scheduling

- Schedule demo session or meeting
 - Select date & time
 - Assign counselor
-

6. Notification System

- Notify student when:
 - Demo is scheduled
 - Appointment is booked
 - Notification via:
 - Email / SMS / WhatsApp (any one required)
-

7. Dashboard & Analytics

- Total enquiries
 - Conversion rate
 - Stream-wise enquiries
 - Daily / Monthly reports
-

8. Search & Filters

- Search by name/contact
 - Filter by:
 - Stream
 - Status
 - Date
-

Test Cases

Test Case 1: Add Enquiry

- **Input:**
Name: Rahul Sharma
Contact: 9876543210
Stream: Data Science
Source: Instagram
 - **Expected Output:**
 - Enquiry added successfully
 - Status = "New"
-

Test Case 2: Update Enquiry Status

- **Action:** Change status to "Interested"
 - **Expected Output:**
 - Status updated successfully
-

Test Case 3: Add Follow-up

- **Input:** “Student wants weekend batch”
 - **Expected Output:**
 - Follow-up saved with timestamp
-

✓ **Test Case 4: Schedule Demo**

- **Input:**
Date: 25 March
Time: 11:00 AM
 - **Expected Output:**
 - Demo scheduled successfully
-

✓ **Test Case 5: Notification Trigger**

- **Action:** Demo scheduled
 - **Expected Output:**
 - Student receives notification:
“Your demo session is scheduled on 25 March at 11:00 AM”
-

✓ **Test Case 6: Filter by Stream**

- **Input:** Stream = Web Development
 - **Expected Output:**
 - Only Web Development enquiries displayed
-

✓ **Test Case 7: Search Enquiry**

- **Input:** “Rahul”
 - **Expected Output:**
 - Matching enquiry displayed
-

✓ **Test Case 8: Delete Enquiry**

- **Action:** Delete a record
- **Expected Output:**
 - Enquiry removed successfully

✓ Test Case 9: Analytics Dashboard

- **Expected Output:**
 - Total enquiries count
 - Converted count
 - Conversion rate (%)
 - Stream-wise chart

✓ Test Case 10: Convert Enquiry

- **Action:** Mark enquiry as "Converted"
- **Expected Output:**
 - Status updated
 - Reflected in analytics

🚩 Expected Deliverable

- Fully functional web application
 - Clean UI
 - Working CRUD operations
 - Demo scheduling + notification system
 - Analytics dashboard
-
